

GSC Wireless Security System

204.99

A deadbolt is not a security system. Sure, it can help, but it's easy to add something a bit more high tech, without breaking the bank. After all, you may not live inside Fort Knox, but that doesn't mean you can't act like it. Instead of calling in a pro, digging into Drywall and insulation, and having a programmer tweak a system beyond your comprehension; there are a variety of products out there that can start protecting your most precious belongings within minutes. The Visonic PowerMax Plus is one of those systems that can take the guesswork out of setting up security for your home. It's perfect for a smaller home or apartment, or someone that's just starting out with home security. Many of those people don't know what they need or don't want to make a big financial commitment at the beginning. This kit is a fraction of the cost of custom systems. However, it does provide a complete security solution, as well as the option to add on more features and equipment later—again, without having to call in a pro.

Think about the most vulnerable areas of your home. This would be a great place for one of Visonic's MCT-302 magnetic contact transmitters. Two of these are included in the starter kit. Each one can be easily placed at any door or window opening. Don't worry about Fido interfering with the system, either. The included K9-85 MCW will take care of your four-legged friends. This sensor can distinguish between man and man's best friend (or friends); working with the system so that pets won't constantly trigger the alarm. Instead, if a guarded window or other area is opened, the MCT-302 will send a signal back to a two-way wireless keypad. Want to protect additional areas? Transmitters can also be purchased separately, and added to any area around your home.

The keypad is sort of the brain behind the system. This is the point where all of the action happens. When a transmitter is triggered, it sends a message to this device. Then, the system will call your cell or send an email. Of course, it's also one of the spots where you will arm and disarm the system. However, if you don't feel like standing, the MCT234 keyfob will allow you to be lazy and protected. This 4-button controller comes with the system, and can arm or disarm the unit from anywhere within range. It's actually perfect for when you are fumbling to get into a dark house at night.

Although the system comes pre-programmed, the keypad area is also where you would add in other products. Of course, there are plenty of those! One neat idea is to add a few cameras into the mix. This will allow you to take a peek at your property, when you are inside the home. Two PowerLink packages are also available, and can provide those shots to you anywhere there's a web connection. It's not just convenient for when you're out of town, but also to see if there has been a delivery, when the kids get home from school, and any other day-to-day activities.

PowerMax+ Features:

- Supports camera connectivity for real-time viewing
- Plug and Protect™ fast and easy installation
- Supports advanced modules for GSM full backup connection, Internet access, wireless external siren, etc.
- Remote home management – alarms, lights, appliances, A/C – via telephony, cellular or Internet connections
- Optional GSM-based backup communication channel – for uninterrupted connectivity even in case of tampering with the system
- Complete home control solution – provides status updates & controls up to 15 electrical devices (dim/bright, etc.)
- Detectors supported: PIR and pet-immune motion detectors; glass-break, flood, smoke and gas detectors; door/window magnetic contact, and more
- Event reporting to: monitoring stations, pagers, SMS messages, e-mail, web applications, mobile phones and regular phones.
- Family message center with standard and remote access for voice recording/playback.
- Remotely initiated hands-free 2-way voice communication.
- Latchkey mode informs parents of a child's arrival to the home.
- Easy and convenient programming options.
- Intuitive textual and audible user interface with language adaptation.
- Advanced jamming detection in compliance with the highest industry standards.
- Full compliance with international standards and regulations
